BRUSSELS, 18 SEPTEMBER 2023 – *The success story continues: KNXperience, the world's most important online tradeshow and conference for smart living, returns for the third time to present the latest innovations from the KNX universe. And thanks to its extension to four event days, each with its own theme, it offers participants more space and more time than ever to discover the latest KNX solutions for smart living and to get in touch with top-class speakers and KNX experts. KNXperience will take place as a full-fledged digital event on the 26th and 27th of September and on the 4th and 11th of October. Registrations are free and can be made at <https://knxperience.knx.org>.*

4-day conference programme to learn trends and gain insights

KNXperience 2023 puts the focus on the most important topics from the world of KNX. From sustainability and energy efficiency (26 September) to the latest KNX products (27 September), KNX IoT and Connectivity (4 October) and KNX Secure (11 October) – participants will get deep insights into the hottest KNX trends. On each conference day, high-profile speakers share their expertise in exciting presentations, KNX Members showcase their latest KNX developments, solutions and services at a multitude of digital exhibition booths and a special smart matching system takes the networking of the KNX Community to a new level.

Just by clicking: Visit booths like at real trade shows

Alongside the comprehensive conference programme, the heart of KNXperience is the digital exhibition hall. Virtual exhibition booths with real experts from the industry await the participants and their questions. Starting one-to-one conversations is as easy as getting first-hand information about the showcased KNX solutions and services or participating in roundtable sessions: All interactions and activities are generally carried out via PC, smartphone or tablet, no matter where the participants are located. These booths will be open throughout the KNXperience.

Networking on a new level

The KNXperience is not only the right place to get informed about the newest KNX developments. In addition, the popular online tradeshow and conference organised by KNX Association has established itself as the central networking platform for the global KNX Community. With a special networking area, it offers unlimited opportunities to exchange ideas, to make new contacts and to find the best partners for the realisation of new KNX projects. For this, a smart matching system connects participants of KNXperience with other professionals based on their interests and guarantees that they spend their valuable time on the most meaningful interactions.

Smart home and building solutions.
Global. Secure. Connected.

About KNX

KNX Association develops and promotes the KNX standard to offer smart home and building solutions on a worldwide scale, ranging from lighting and blind control to various security systems, heating, ventilation, air conditioning, monitoring, alarming, water control, energy management, smart metering as well as household appliances, audio/video and many more. All these building applications can be configured with a single, manufacturer independent design and commissioning tool (ETS), with a complete set of supported communication media (TP, PL, RF and IP) as well as an extension of the KNX technology towards the Internet of Things (KNX IoT). KNX is approved as a European (CENELEC EN 50090 and EN ISO 22510) and an International standard (ISO/IEC 14543-3). This standard is based on more than 30 years of experience in the market. Over 500 manufacturers worldwide from different application domains have more than 8,000 KNX certified product groups in their catalogues. The KNX Association has partnership agreements with more than 100,000 installation companies in 190 countries.
